

The ITTN, in collaboration with Pearl Cohen, are pleased to invite you to a series of webinar sessions on recent technology and legal matters

LECTURE #1

RECENT CHANGES IN PATENTABILITY OF SOFTWARE RELATED INVENTIONS

Patentability of software related inventions according to the US patent law has undergone considerable changes in recent years. In a series of decisions, the US Supreme Court has changed the definition of patentable subject matter several times, in what seems to be an attempt to narrow the scope of patentable software inventions, greatly affecting the way US patent applications are examined. In this lecture we'll review recent US supreme Court decisions and will shed a light on the current status of what is and what is not patentable in the field of software inventions.
